The Internet Engineering Task Force (IETF) is a not-for-profit organisation that is responsible for developing and promoting voluntary Internet standards. The Internet Engineering Task Force (IETF) is the principal body responsible for the technical development and formulation of standards for the Internet. The Internet Engineering Task Force (IETF) is the organisation that was in charge of developing the Internet Protocol (IP), the Transmission Control Protocol (TCP), the User Datagram Protocol (UDP), the Domain Name System (DNS), and a great deal of other protocols and standards that go into making up the Internet.
